

ECSE-415 Introduction to Computer Vision

Course Project Presentation Guidelines

Dates: April 7 and April 9, 2026. 11:35am – 12:55pm (in person, during class)

All groups are required to submit their presentation as a PDF with a file name of **XX_ProjectPresentation_ECSE415.pdf** by **April 6, 11:59pm** (replace XX with your group number). No edits to the submitted presentations are permitted after this deadline under any circumstances for groups on either presentation date. The presentations will be uploaded to a TA laptop. All presentations will take place on the TA laptop (to ensure smooth transitions between groups). A table with the timeslots for each group will be provided.

Here are some basic guidelines for the project presentations:

Length:

The length of the presentation is **10 minutes**: **8 minutes** (presentation) + **2 minutes** (Q&A). The presentation should follow a standard conference format. Details are below:

Presentation - Content grading (8 marks)

Each of the members of the group should take a turn presenting. All members of the group will receive the same grade. The presentation should have the following basic components (This particular format is not strict and variations from this format are permitted.):

- **Introduction (1 mark):** The students should introduce the overall system that they developed. They should discuss why the problem is difficult/interesting/important.
- **Method (3 marks):** The students should go over each of the steps in the project. They should explain and justify the design decisions made at each step.
- **Results (2 marks):** The student should describe the approaches used in their experiments and show the results of applying the approach for each of the required steps. Qualitative and quantitative results should be presented.
- **Discussion (1 mark):** A discussion of the overall system should follow. Here, it is appropriate to bring forward insights regarding the approaches take – Where does it work? What are the limitations of the approach? A discussion of the results should follow.

Note that the primary focus of the project is not to get the best results, but to show your understanding of the methods that you explored. You should describe the pros and cons of the competing methods. If you are getting low accuracies for any particular aspects of the project then this should be explained in detail.

Quality of the Presentation:

The presentation should be clear and easy to follow. The slides should look professional and concise. The timing model above should be respected. Because of the tight scheduling for these presentations, you **must** complete your presentation within the 8-minute time limit, or you will be asked to stop. Please practice beforehand and time yourself.

As in the report, all content in the slides (including figures) should be properly cited where appropriate. It is unacceptable to claim the work of others as your own. See Academic Integrity Guidelines at the end of this document.

Q&A (2 marks)

- A: Provide meaningful answers to questions raised during the Q&A section of your own presentation. (1 mark)
- Q: Attend both sessions (required for all group members) and ask a thoughtful question during the presentation of another group (can be asked by one group member). (1 mark)

ACADEMIC INTEGRITY:

"McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see www.mcgill.ca/students/srr/honest/ for more information)."

"L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site www.mcgill.ca/students/srr/honest/)."
